

emplica „miniplug“

The fastest and most
inexpensive way to start
professional formwork
repair right now

As simple as an egg.

The emplica „miniplug“ system was developed especially for repairing small damages in plywood formwork panels. With unmatched results and less effort than anything comparable.

Larger repair plugs may leave an imprint on exposed concrete. Emplica miniplugs are so discreet, you might not even see them.

For scrooges

The Emplica "mini plug" system is characterized by very high-quality, yet low-cost components. A Dewalt 615 router and the new router bit DB18 wont leave a mark in your pocket.

The miniplugs are manufactured in the same high quality as their big brothers plicafix 40 and 60 plicafix. Obviously, we would not offer anything that is below our famous quality standards.

The routerbit DB18 is developed with a simplified structure for cutting your expenses. Resharpener is possible by suitable establishments. Blades made of hardened steel ensure sufficient life until the next honing service.

Attached to the router DeWalt 615e, the bit can be operated without any problems. Electronic speed control and soft starting ensure safety and easy handling. Low machine weight (2.9 Kg) allows fatigue-free working.

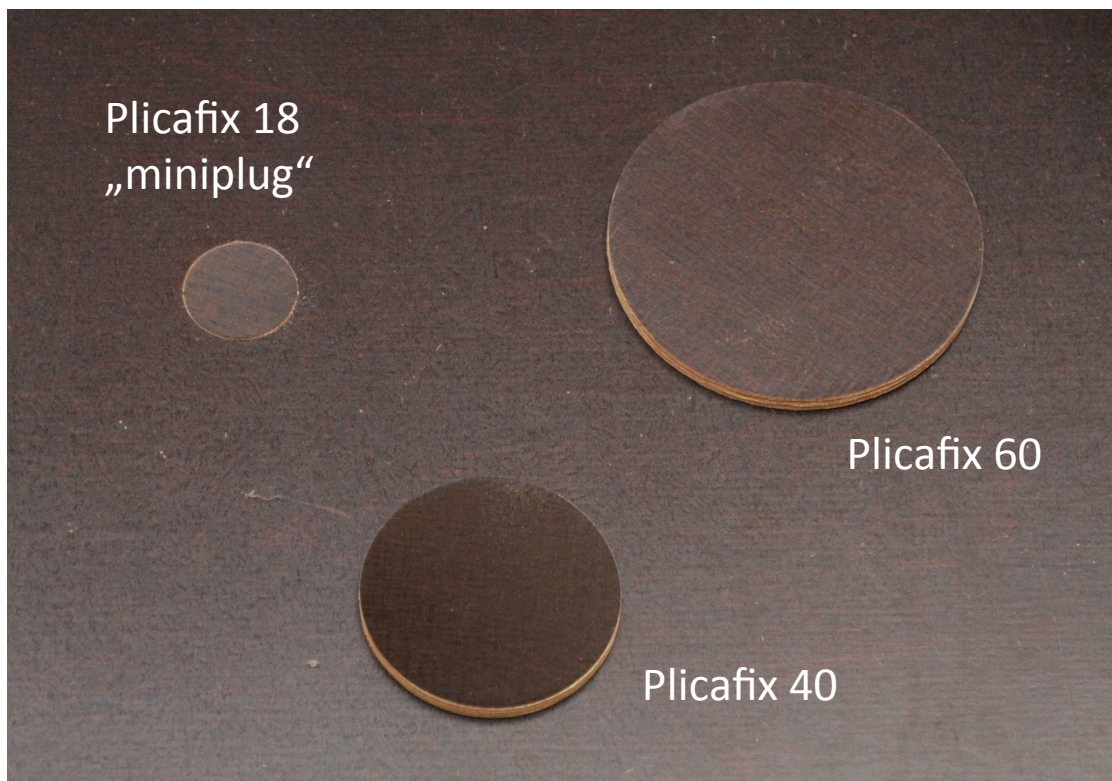

Darling, have you seen my glasses?

Emplica miniplugs have a great advantage when the damage on the surface is small and the use of plicafix 40 or plicafix 60 repair plugs would be exaggerated.

Yet, using expensive filler wont be necessary any longer. The application of miniplugs is even faster than filler.

The repairs are almost invisible and inconspicuous even on exposed concrete. Only a trained eye will spot them.

Altogether a fantastic repair method at a low price - without leaving traces.

Yes, please and thank you!

The miniplug starter kit consists of following:

- Plunge router DeWalt 615
- Router bit DB18
- 1000 pcs. „miniplugs“ plicafix 18
